Branch : B.E. - EEE

Year & Semester : III Year / VI Semester

EE6612-MICROPROCESSOR AND MICROCONTROLLER LAB

ANNA UNIVERSITY: CHENNAI**REGULATION - 2013****SYLLABUS****EE6612 MICROPROCESSOR AND MICROCONTROLLER
LABORATORY****OBJECTIVES:**

To provide training on programming of microprocessors and microcontrollers and understand the interface requirements.

LIST OF EXPERIMENTS:

1. Simple arithmetic operations: addition / subtraction / multiplication / division.
2. Programming with control instructions:
 - (i) Ascending / Descending order, Maximum / Minimum of numbers
 - (ii) Programs using Rotate instructions
 - (iii) Hex / ASCII / BCD code conversions.
3. Interface Experiments: with 8085
 - (i) A/D Interfacing. & D/A Interfacing.
4. Traffic light controller.
5. I/O Port / Serial communication
6. Programming Practices with Simulators/Emulators/open source
7. Read a key, interface display
8. Demonstration of basic instructions with 8051 Micro controller execution, including:
 - (i) Conditional jumps, looping
 - (ii) Calling subroutines.
9. Programming I/O Port 8051
 - (i) study on interface with A/D & D/A
 - (ii) study on interface with DC & AC motor .
10. Mini project development with processors.

TOTAL: 45 PERIODS

INDEX

EX.NO	DATE	NAME OF THE EXPERIMENT	STAFF SIGN	REMARKS
1		PROGRAM FOR 8 BIT ADDITION USING 8085		
2		PROGRAM FOR 8 BIT SUBTRACTION USING 8085		
3		PROGRAM FOR 8 BIT MULTIPLICATION USING 8085

13		PROGRAM FOR INTERFACING OF ADC WITH 8085		
14		PROGRAM FOR INTERFACING OF DAC WITH 8085		
15		PROGRAM FOR INTERFACING OF SERIAL PORT COMMUNICATION WITH 8085		
16		PROGRAM FOR INTERFACING OF KEYBOARD AND DISPLAY WITH 8085		
17		PROGRAM FOR INTERFACING OF TRAFFIC LIGHT CONTROLLER WITH 8085		
18		PROGRAM FOR 8 BIT ADDITION USING 8051		
19		PROGRAM FOR 8 BIT SUBTRACTION USING 8051		
20		PROGRAM FOR 8 BIT MULTIPLICATION USING 8051		
21		PROGRAM FOR 8 BIT DIVISION USING 8051		
22		PROGRAM FOR INTERFACING OF ADC WITH 8051		
23		PROGRAM FOR INTERFACING OF DAC WITH 8051		
24		PROGRAM FOR INTERFACING OF STEPPER MOTOR WITH 8051		

Ex No : 1**Date :****PROGRAM FOR 8 BIT ADDITION USING 8085****AIM:**

To write an assembly language program for addition of two 8 bit data using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Clear the register **C**
2. Initialize the memory pointer to data location.
3. Get the first Data from memory Location and move to register **A**.
4. Get the second data from memory location.
5. Add first and second data.
6. If carry the increment the register **C** by one.
7. Store the result to memory location.

FLOW CHART: (8 bit Addition)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>MVI C, 00</i>		Clear the “C” Register
		<i>LXI H, 9200</i>		Initialize the memory pointer
		<i>MOV A, M</i>		Move the First Data to A Register
		<i>INX H</i>		Increment the memory pointer
		<i>ADD M</i>		Add First and Second Data
		<i>JNC LOOP1</i>		Jump if No Carry to loop1
		<i>INR C</i>		Increment the “C” register by one
	Loop1	<i>STA 9500</i>		Store the Result
		<i>MOV A, C</i>		Move the Carry result to Register “A”
		<i>STA 9501</i>		Store the Carry Result
		<i>HLT</i>		Stop the program

Input:

Memory location	Data
9200	
9201	

Output:

Memory location	Data
9500	
9501	

Result :

Thus the addition of two 8 bit data’s was executed using the 8085 microprocessor.

Ex No : 2**Date :****PROGRAM FOR 8 BIT SUBTRACTION USING 8085****AIM:**

To write an assembly language program for subtraction of two 8 bit data using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Clear the register "C"
2. Initialize the memory pointer to data location.
3. Get the first Data from memory Location and move to register "A".
4. Get the second data from memory location.
5. Subtract the first and second data.
6. If occur carry the increment the register 'c' by one.
7. Store the result to memory location.

FLOW CHART: (8 bit Subtraction)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>MVI C, 00</i>		Clear the “C” Register
		<i>LXI H, 9200</i>		Initialize the memory pointer
		<i>MOV A, M</i>		Move the First Data to A Register
		<i>INX H</i>		Increment the memory pointer
		<i>SUB M</i>		Subtract First and Second Data
		<i>JNC LOOP1</i>		Jump if No Carry to loop1
		<i>INR C</i>		Increment the “C” register by one
		<i>CMA</i>		Complement the Accumulator
		<i>ADI 01</i>		Add by one for two’s complement
	Loop1	<i>STA 9500</i>		Store the Result
		<i>MOV A, C</i>		Move the Carry result to Register “A”
		<i>STA 9501</i>		Store the Carry Result
		<i>HLT</i>		Stop the program

Input:

Memory location	Data
9200	
9201	

Output:

Memory location	Data
9500	
9501	

RESULT :

Thus the subtraction of two numbers was performed using the 8085 microprocessor.

Exp No : 3**Date :****PROGRAM FOR 8 BIT MULTIPLICATION USING 8085****AIM:**

To write an assembly language program for multiplication of two 8 bit data using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Clear the register “A”
2. Initialize the memory pointer to data location.
3. Get the first Data from memory Location and move to register “C”.
4. Get the second data from memory location.
5. Add the Memory Data and A Register.
6. Decrement the register ‘c’ by one
7. Check the register “C’ is Zero otherwise repeat step 5.
8. Store the result to memory location.

PROGRAM :

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>MVI A, 00</i>		Clear the “A” Register
		<i>LXI H, 9200</i>		Initialize the memory pointer
		<i>MOV C, M</i>		Move the First Data to C Reg
		<i>INX H</i>		Increment the memory pointer
	Loop1	<i>ADD M</i>		Add First and Second Data
		<i>DCR C</i>		Decrement C register by one
		<i>JNZ LOOP1</i>		Jump if No Zero to loop1
		<i>STA 9500</i>		Store the Result
		<i>HLT</i>		Stop the program

FLOW CHART: (8 bit Multiplication)

Input:

Memory location	Data
9200	
9201	

Output:

Memory location	Data
9500	

RESULT:

Thus the multiplication of two numbers was performed using the 8085 microprocessor.

Exp No : 4**Date :****PROGRAM FOR 8 BIT DIVISION USING 8085****AIM:**

To write an assembly language program for division of two 8 bit data using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Clear the Register "C".
2. Initialize the Memory Pointer.
3. Get the First Data from memory to Accumulator (Dividend)
4. Get the Second Data from memory (Divisor)
5. Compare Register "A" and "M"
6. If No carry, Subtract Divisor from Dividend [(A)-(M)]
7. Increment Register "C" by one.
8. Compare Register "A" and "M"
9. If No Carry go to step 6
10. Store the result to memory location.

FLOWCHART: (8 bit Division)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>MVI C, 00</i>		Clear the “C” Register
		<i>LXI H, 9200</i>		Initialize the memory pointer
		<i>MOV A, M</i>		Move the First Data to A Register
		<i>INX H</i>		Increment the memory pointer
		<i>CMP M</i>		Compare register A and M data's
		<i>JC Loop1</i>		If carry jump to loop1
	Loop2	<i>SUB M</i>		Subtract register A and M Data
		<i>INR C</i>		Increment C register by one
		<i>CMP M</i>		Compare register A and M data's
		<i>JNC Loop2</i>		Jump if No Carry to loop2
		<i>STA 9500</i>		Store the Quotient Result
		<i>MOV A, C</i>		Move register C to A
		<i>STA 9501</i>		Store the Remainder Result
		<i>HLT</i>		Stop the program
	Loop1	<i>MVI A, 00</i>		Clear the accumulator
		<i>STA 9500</i>		Store the result
		<i>STA 9501</i>		Store the result
		<i>HLT</i>		stop

Input:

Memory location	Data
9200	
9201	

Output:

Memory location	Data
9500	
9501	

RESULT :

Thus the division of two numbers was performed using the 8085 microprocessor.

Exp No : 5**Date :****LARGEST NUMBER OF PROGRAM IN A GIVEN ARRAY****AIM:**

To write an assembly language program to find the largest number in a given array using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Initialize the Memory Pointer.
2. Load the number of array to B register.
3. Move the first data to register A.
4. Increment the Memory pointer.
5. Compare the register A and M .
6. If No carry jump to loop2.
7. Move the register M to A.
8. Decrement the register B by one.
9. Check register B is Zero otherwise go to step 4.
10. Store the Largest value to memory location.
11. Stop.

FLOWCHART: (LARGEST NUMBER)

PROGRAM:

ADDRES S	LABEL	MNEMONICS	OPCOD E	COMMENTS
8000		<i>LXI H, 9100</i>		Initialize the memory pointer
		<i>MVI B, 04</i>		Load the counter to register B
		<i>MOV A, M</i>		Move the First Data to A Register
	Loop1	<i>INX H</i>		Increment the memory pointer
		<i>CMP M</i>		Compare register A and M datas
		<i>JNC Loop2</i>		If No carry jump to loop2
		<i>MOV A, M</i>		Move register M to A
	LOOP2	<i>DCR B</i>		Decrement B register by one
		<i>CMP M</i>		Compare register A and M data's
		<i>JNZ Loop1</i>		Jump if No Zero to loop1
		<i>STA 9500</i>		Store the Result to memory
		<i>HLT</i>		Stop

Input:

Memory location	Data
9100	
9101	
9102	
9103	

Output:

Memory location	Data
9500	

RESULT:

Thus the program to find the largest number in a given array using 8085 microprocessor was executed.

Exp No : 6

Date :

SMALLEST NUMBER OF PROGRAM IN A GIVEN ARRAY

AIM:

To write an assembly language program to find the smallest number in a given array using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Initialize the Memory Pointer.
2. Load the number of array to B register.
3. Move the first data to register A.
4. Increment the Memory pointer.
5. Compare the register A and M .
6. If carry jump to loop2.
7. Move the register M to A.
8. Decrement the register B by one.
9. Check register B is Zero otherwise go to step 4.
10. Store the Largest value to memory location.
11. Stop.

FLOWCHART: (Smallest Number)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>LXI H, 9100</i>		Initialize the memory pointer
		<i>MVI B, 04</i>		Load the counter to register B
		<i>MOV A, M</i>		Move the First Data to A Register
	Loop1	<i>INX H</i>		Increment the memory pointer
		<i>CMP M</i>		Compare register A and M datas
		<i>JC Loop2</i>		If carry jump to loop2
		<i>MOV A, M</i>		Move register M to A
	Loop2	<i>DCR B</i>		Decrement B register by one
		<i>CMP M</i>		Compare register A and M data's
		<i>JNZ Loop1</i>		Jump if No Zero to loop1
		<i>STA 9500</i>		Store the Result to memory
		<i>HLT</i>		Stop

Input:

Memory location	Data
9100	
9101	
9102	
9103	

Output:

Memory location	Data
9500	

RESULT:

Thus the program to find the smallest number in a given array using 8085 microprocessor was executed.

Exp No : 7

Date :

PROGRAM SORT ASCENDING ORDER IN A GIVEN ARRAY

AIM:

To write an assembly language program to sort ascending order in a given array using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Initialize the Memory Pointer.
2. Load the number of array to B register.
3. Move the first data to register A.
4. Increment the Memory pointer.
5. Compare the register A and M .
6. If carry jump to loop2.
7. Move the register M to A.
8. Decrement the register B by one.
9. Check register B is Zero otherwise go to step 4.
10. Store the Largest value to memory location.
11. Stop.

FLOWCHART: (Ascending Order)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>MVI B, 09</i>		Load the counter to register B
	L3	<i>LXI H, 9100</i>		Initialize the memory pointer
		<i>MVI C, 09</i>		Load the counter value
	L2	<i>MOV A, M</i>		Move the First Data to A Register
		<i>INX H</i>		Increment the memory pointer
		<i>CMP M</i>		Compare register A and M data's
		<i>JC L1</i>		If carry jump to loop1
		<i>MOV D, M</i>		Move register M to D
		<i>MOV M, A</i>		Move register M to A
		<i>DCX H</i>		Decrement memory pointer
		<i>MOV M, D</i>		Move register M to D
		<i>INX H</i>		Increment memory pointer
	L1	<i>DCR C</i>		Decrement B register by one
		<i>JNZ L2</i>		Jump if No Zero to loop2
		<i>DCR B</i>		Decrement B register by one
		<i>JNZ L3</i>		Jump if No Zero to loop3
		<i>HLT</i>		Stop

Input:

Memory location	Data
9100	
9101	
9102	
9103	
9104	
9105	
9106	
9107	
9108	
9109	

Output:

Memory location	Data
9100	
9101	
9102	
9103	
9104	
9105	
9106	
9107	
9108	
9109	

RESULT:

Thus the program of sort the ascending order in given array was executed by using 8085.

Exp No : 8

Date :

PROGRAM SORT DESCENDING ORDER IN A GIVEN ARRAY

AIM:

To write an assembly language program to sort descending order in a given array using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Initialize the Memory Pointer.
2. Load the number of array to B register.
3. Move the first data to register A.
4. Increment the Memory pointer.
5. Compare the register A and M .
6. If no carry jump to loop2.
7. Move the register M to A.
8. Decrement the register B by one.
9. Check register B is Zero otherwise go to step 4.
10. Store the Largest value to memory location.
11. Stop.

FLOWCHART: (Descending order)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>MVI B, 04</i>		Load the counter to register B
	L3	<i>LXI H, 9100</i>		Initialize the memory pointer
		<i>MVI C, 04</i>		Load the counter value
	L2	<i>MOV A, M</i>		Move the First Data to A Register
		<i>INX H</i>		Increment the memory pointer
		<i>CMP M</i>		Compare register A and M datas
		<i>JNC L1</i>		If carry jump to loop1
		<i>MOV D, M</i>		Move register M to D
		<i>MOV M, A</i>		Move register M to A
		<i>DCX H</i>		Decrement memory pointer
		<i>MOV M, D</i>		Move register M to D
		<i>INX H</i>		Increment memory pointer
	L1	<i>DCR C</i>		Decrement B register by one
		<i>JNZ L2</i>		Jump if No Zero to loop2
		<i>DCR B</i>		Decrement B register by one
		<i>JNZ L3</i>		Jump if No Zero to loop3
		<i>HLT</i>		Stop

Input:

Memory location	Data
9100	
9101	
9102	
9103	
9104	
9105	
9106	
9107	
9108	
9109	

Output:

Memory location	Data
9100	
9101	
9102	
9103	
9104	
9105	
9106	
9107	
9108	
9109	

RESULT:

Thus the program of sort the descending order in given array was executed by using 8085.

EX.NO:9**Date :****PROGRAM FOR CODE CONVERSION – DECIMAL TO HEX****AIM:**

To write an assembly language program to convert a given decimal number into hexadecimal number using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Initialize the Memory Pointer.
2. Increment B register.
3. Increment accumulator by one and adjust to decimal every time.
4. Compare the given decimal number with accumulator value.
5. When both matches, the equivalent hexadecimal value is in B register.
6. Store the resultant in memory location.

FLOWCHART : (DECIMAL TO HEX)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>LXI H, 9100</i>		Initialize the memory pointer
		<i>MVI A, 00</i>		Clear the Accumulator
		<i>MVI B, 00</i>		Clear the B register
	Loop1	<i>INR B</i>		Increment the B register
		<i>ADI 01</i>		Increment the A register
		<i>DAA</i>		Decimal Adjust Accumulator
		<i>CMP M</i>		Compare A and M register
		<i>JNZ Loop1</i>		Jump if No Zero to loop1
		<i>MOV A, B</i>		Move register B to A
		<i>STA 9500</i>		Store the result to memory
		<i>HLT</i>		Stop the program

Input:

Memory location	Data
9100	

Output:

Memory location	Data
9500	

RESULT:

Thus the program of conversion of decimal to hex given data was executed by using 8085.

Exp No:10**Date :****PROGRAM FOR CODE CONVERSION – HEXA DECIMAL TO DECIMAL****AIM:**

To write an assembly language program to convert a given hexadecimal number into decimal number using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Initialize the Memory Pointer.
2. Increment B register.
3. Increment accumulator by one and adjust to decimal every time.
4. Compare the given decimal number with B register value.
5. When both match, the equivalent decimal value is in A register.
6. Store the resultant in memory location.

FLOWCHART : (Decimal To Hex)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>LXI H, 9100</i>		Initialize the memory pointer
		<i>MVI A, 00</i>		Clear the Accumulator
		<i>MVI B, 00</i>		Clear the B register
		<i>MVI C, 00</i>		Clear the C register
	Loop1	<i>INR B</i>		Increment the B register
		<i>ADI 01</i>		Increment the A register
		<i>DAA</i>		Decimal Adjust Accumulator
		<i>JNC NEXT</i>		If no carry go to next loop
		<i>INR C</i>		Increment register C by one
	NEXT	<i>MOV D, A</i>		Transfer A to D
		<i>MOV A, B</i>		Transfer B to A
		<i>CMP M</i>		Compare A and M register
		<i>MOV A, D</i>		Transfer D to A
		<i>JNZ Loop1</i>		Jump if No Zero to loop1
		<i>STA 9500</i>		Store the result to memory
		<i>MOV A, C</i>		Move register B to A
		<i>STA 9501</i>		Store the result to memory
		<i>HLT</i>		Stop the program

Input:

Memory location	Data
9100	

Output:

Memory location	Data
9500	

RESULT:

Thus the program of conversion of hexadecimal to decimal given data was executed by using 8085.

EX.NO:11**DATE :****PROGRAM FOR CODE CONVERSION – BINARY TO ASCII****AIM:**

To write an assembly language program to convert a given binary number into ASCII number using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Start the program
2. Load the data from address 9100 to A
3. Compare register A and data 0Ah(decimal 10).
4. If no carry add 37h with register A.
5. If Carry add 30h with register A.
6. Store the result to memory location.

FLOWCHART: (Binary to ASCII)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>LDA 9100</i>		Get the data to Accumulator
		<i>MVI A, 00</i>		Clear the Accumulator
		<i>CPI 0A</i>		Compare register A and data 10
		<i>JC LOOP1</i>		If carry jump to loop1
		<i>ADI 07H</i>		Add A with 07
	LOOP1	<i>ADI 30H</i>		Add A with 30
		<i>STA 9500</i>		Store the result to memory
		<i>HLT</i>		Stop the program

Input:

Memory location	Data
9100	

Output:

Memory location	Data
9500	

RESULT:

Thus the program of conversion of binary to ASCII given data was executed by using 8085.

Exp No : 12

DATE :

PROGRAM FOR CODE CONVERSION – ASCII TO BINARY

AIM:

To write an assembly language program to convert a given ASCII number into binary number using 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1

ALGORITHM:

1. Start the program
2. Load the data from address 9100 to A
3. Compare register A and data 3Ah.
4. If no carry subtract 37h with register A.
5. If carry subtract 30h with register A.
6. Store the result to memory location.

FLOWCHART : (ASCII TO BINARY)

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000		<i>LDA 9100</i>		Get the data to Accumulator
		<i>MVI A, 00</i>		Clear the Accumulator
		<i>CPI 3A</i>		Compare register A and data 3Ah
		<i>JC LOOP1</i>		If carry jump to loop1
		<i>ADI 07H</i>		Add A with 07
	LOOP1	<i>ADI 30H</i>		Add A with 30
		<i>STA 9500</i>		Store the result to memory
		<i>HLT</i>		Stop the program

Input :

Memory location	Data
9100	

Output:

Memory location	Data
9500	

RESULT:

Thus the program of conversion of ASCII to binary given data was executed by using 8085.

EX.NO:13**DATE :****PROGRAM FOR INTERFACING OF ADC WITH 8085****AIM:**

To write an assembly language program to convert an analog signal into a digital signal using an ADC interfacing with 8085 microprocessor.

APPARATUS REQUIRED:

Sl. No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1
4	ADC Interfacing kit	1
5	Multimeter	1

Working procedure for ADC:

- Connect the 5v power supply to trainer kit and adc chord.
- Connect the 26-pin connector from the kit to adc chord.
- Connect the card from keyboard into the socket provided in the kit.
- Switch on the power supply.
- Assemble your program.
- Vary the pot in the adc chord.
- Execute it and view the output count in the register A which will be displayed in LCD display.
- Repeat the above steps for different inputs in the pots.

8085 ADDRESS:

8255 control register address – 23H

8255 port A address -20H

8255 port B address -21 H

8255 port C address -22H

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
9000		<i>MVI A, 90</i>		Control Word for port A as input and port c as output

		<i>RET</i>		Return to main Program

Analog Input	Digital output

RESULT :

Thus the conversion of a analog signal into and digital signal was executed using interfacing of ADC with 8085.

EX.NO:14**DATE :****PROGRAM FOR INTERFACING OF DAC WITH 8085****AIM:**

To write an assembly language program to convert a digital signal into a analog signal using an DAC interfacing with 8085 microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1
4	DAC Interfacing kit	1
5	CRO	1

Working procedure for DAC:

- Connect the 5v power supply to trainer kit and dac(0800) chord.
- Connect the 26-pin connector from the kit to dac(0800) chord.
- Connect the card from keyboard into the socket provided in the kit.
- Switch on the power supply.
- Assemble your program.Give the digital data in the software program itself.
- Execute it and view the output count in the register A which will be displayed in CRO
- Repeat the above steps for different digital inputs.

i)SQUARE WAVE FORM**ALGORITHM:**

1. Load the initial value (00) to Accumulator and move it to DAC.
2. Call the delay program
3. Load the final value (FF) to accumulator and move it to DAC.
4. Call the delay program.
5. Repeat steps 2 to 5.
6. Execute the program and using a CRO, verify that the waveform at the DAC2 output is a square-wave.
Modify the frequency of the square-wave, by varying the time delay.

8085 ADDRESS:

8255 control register address – 23H

8255 port A address -20H

8255 port B address -21 H

8255 port C address -22H

PROGRAM: SQUARE WAVE FORM

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
9000		<i>MVI A, 80</i>		Control Word
		<i>OUT 23</i>		Out in control REG
	LOOP1	<i>MVI A, FF</i>		High Input
		<i>OUT 21</i>		output in port B
		<i>CALL 9100</i>		Delay subroutine
		<i>MVI A, 00</i>		Low Input
		<i>OUT 21</i>		output in port B
		<i>CALL 9100</i>		Delay subroutine
		<i>JMP LOOP1(9004)</i>		Jump To Start
9100	delay	<i>MVI C, FF</i>		Delay Count
	Loop1	<i>MVI B, FF</i>		Load data FF to register A
	Loop2	<i>NOP</i>		No operation
		<i>NOP</i>		No operation
		<i>DCR B</i>		Decrement register B
		<i>JNZ loop2</i>		If no zero jump to loop2
		<i>DCR C</i>		Decrement register C by one
		<i>JNZ loop1</i>		If no zero jump to loop1
		<i>RET</i>		Return to main Program

SQUARE WAVE FORMS ;

II) SAW TOOTH GENERATION:**ALGORITHM:**

1. Load the initial value (00) to Accumulator
2. Move the accumulator content to DAC.
3. Increment the accumulator content by 1.
4. Repeat steps 3 and 4.
5. Output digital data from 00 to FF constant steps of 01 to DAC1 repeat this sequence again and again. As a result a saw – tooth wave will be generated at DAC1 output.

PROGRAM: SAW TOOTH WAVE FORM

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
9000		<i>MVI A, 80</i>		Control Word
		<i>OUT 23</i>		Out in control REG
	START	<i>MVI A, 00</i>		Low Input
	LOOP1	<i>OUT 21</i>		output in port B
		<i>INR A</i>		Increment register A by one
		<i>JNZ LOOP1</i>		If zero jump to loop1
		<i>JMP START</i>		Jump To Start

SAW TOOTH WAVE FORM :

(iii) TRIANGULAR WAVE GENERATION:**ALGORITHMS:**

1. Load the initial value (00) to Accumulator.
2. Move the accumulator content to DAC
3. Increment the accumulator content by 1.
4. If accumulator content is zero proceed to next step. Else go to step 3.
5. Load value (FF) to accumulator.
6. Move the accumulator content to DAC.
7. Decrement the accumulator content by 1.
8. If accumulator content is zero go to step 2. Else go to step 2.

PROGRAM: TRIANGULAR WAVE FORM

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
9000	START	<i>MVI L, 00</i>		Transfer 00 to register L
	LOOP1	<i>MOV A, L</i>		Transfer L to A
		<i>OUT 21</i>		Output in control register
		<i>INR L</i>		Increment register L
		<i>JNZ LOOP1</i>		If no zero jump to loop1
		<i>MVI L, FF</i>		Transfer FF to register L
	LOOP2	<i>MOVA, L</i>		Transfer L to A
		<i>OUT 21</i>		Output in control register
		<i>DCR L</i>		Decrement register L
		<i>JNZ LOOP2</i>		If no zero jump to loop2
		<i>JMP START</i>		Jump to start loop

TRIANGULAR WAVE FORM :**RESULT :**

Thus the conversion of a digital signal into an analog signal was executed using interfacing of DAC with 8085.

EXP.No :15**DATE :****PROGRAM FOR KEYBOARD AND DISPLAY INTERFACING WITH 8085****AIM:**

To interface 8279 Programmable Keyboard Display Controller with 8085 Microprocessor.

APPARATUS REQUIRED:

Sl.No	Name of the Apparatus	Qty
1	8085 Microprocessor kit	1
2	+5Volts Power Supply	1
3	Keyboard Connector	1
4	Keyboard and Display Interfacing kit	1

**RESULT :**

Thus the conversion of a digital signal into an analog signal was executed using interfacing of DAC with 8051.

EX.NO:24**DATE :**

PROGRAM FOR INTERFACING STEPPER MOTOR USING 8051 **MICROCONTROLLER**

AIM:

To interface a stepper motor with 8051 microcontroller and operate it.

THEORY:

A motor in which the rotor is able to assume only discrete stationary angular position is a stepper motor. The rotary motion occurs in a step-wise manner from one equilibrium position to the next. Stepper Motors are used very wisely in position control systems like printers, disk drives, process control machine tools, etc.

The basic two-phase stepper motor consists of two pairs of stator poles. Each of the four poles has its own winding. The excitation of any one winding generates a North Pole. A South Pole gets induced at the diametrically opposite side. The rotor magnetic system has two end faces. It is a permanent magnet with one face as South Pole and the other as North Pole.

The Stepper Motor windings A1, A2, B1, B2 are cyclically excited with a DC current to run the motor in clockwise direction. By reversing the phase sequence as A1, B2, A2, B1, anticlockwise stepping can be obtained.

2-PHASE SWITCHING SCHEME:

In this scheme, any two adjacent stator windings are energized. The switching scheme is shown in the table given below. This scheme produces more torque.

A1	A2	B1	B2	HEX	CLOCK WISE	ANTI CLOCKWISE
1	0	0	1	09		
0	1	0	1	05		
0	1	1	0	06		
1	0	1	0	0A		

PROCEDURE:

1. Enter the above program starting from location 4100.and execute the same.
2. The stepper motor rotates.
3. Varying the count at R4 and R5 can vary the speed.
4. Entering the data in the look-up TABLE in the reverse order can vary direction of rotation.

PROGRAM:

ADDRESS	LABEL	MNEMONICS	OPCODE	COMMENTS
8000	START	<i>MOV DPTR, #TABLE</i>		Initialize the memory pointer
		<i>MOV R0, #04</i>		Load the counter
	LOOP1	<i>MOVX A, @DPTR</i>		Move the First Data to A Reg
		<i>PUSH DPH</i>		Transfer DPH to SP
		<i>PUSH DPL</i>		Transfer DPL to SP
		<i>MOV DPTR, #0FFC0</i>		Initialize the port address
		<i>MOVX @DPTR, A</i>		Send the value to port address
		<i>MOV R4, #0FF</i>		Delay subroutine
	D1	<i>MOV R5, #0FF</i>		
	D2	<i>DJNZ R5, D2</i>		
		<i>DJNZ R4, D1</i>		
		<i>POP DPL</i>		
		<i>POP DPH</i>		
		<i>INC DPTR</i>		Next data
		<i>SJMP : START</i>		Stop the program
	LOOKUP	<i>09, 06, 05, 0A</i>		Data's

RESULT:

Thus a stepper motor was interfaced with 8051 and run in forward and reverse directions at various speeds.
